

Moving_code_to_flash_space

Step 1: Check for the Switch SW3 position1(default it will be in ON condition) is in ON condition before loading the code.

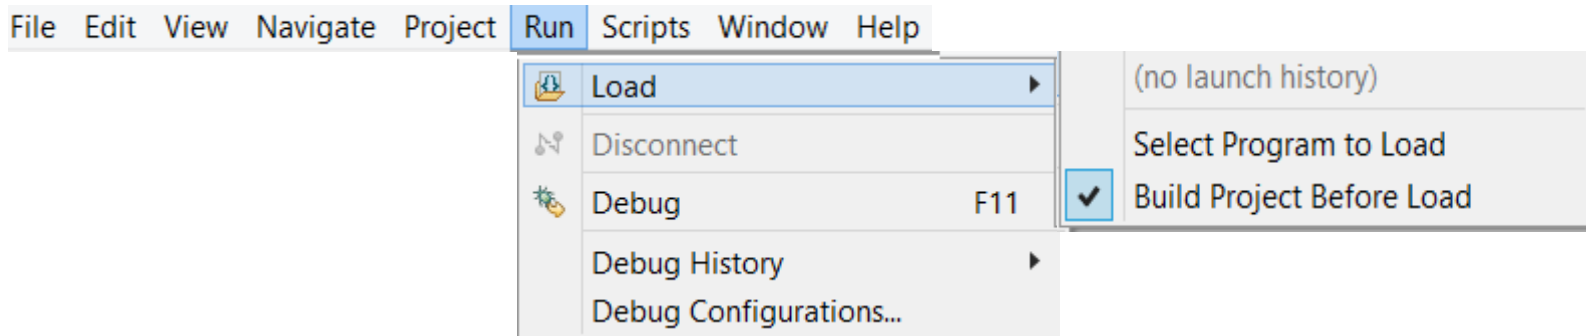

Step 2: In Workspace select **1 Flash (Optimization level 2, Flash build)** from the  option as shown below,

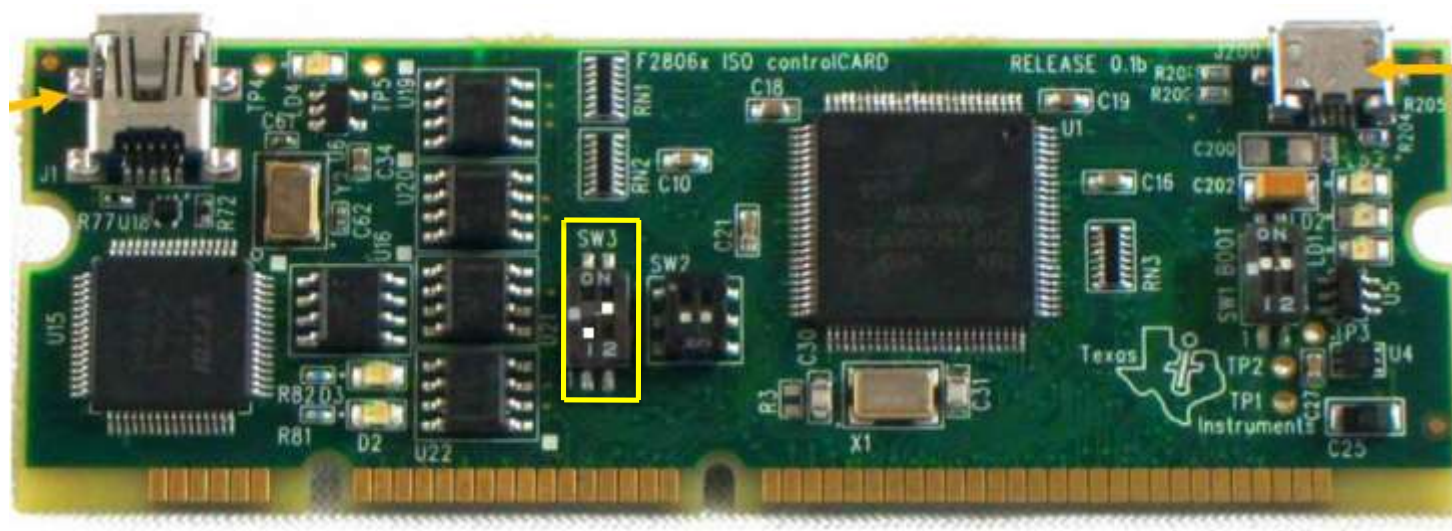

Or, Go to **Project -> Build Configuration -> Set Active-> 1 Flash (Optimization level 2, Flash build)**.

Step 3: To Load the code **Run -> Load -> Select Program to Load**.

Step 4: Unplug the JTAG probe from controller and Switch off DRV8301 kit.

Step 5: Move the Switch SW3 position1 to down.

Step 6: Then turn on the kit . Now the program is loaded into the Flash memory.
